Research Projects _____

Survey on explainability and interpretability of multilingual LLMs $\,$

Nov 2024 - Aug 2025

- Surveyed 200+ papers on multilingual explainability (EMNLP 2025).
- Categorised existing literature according to the explainability techniques employed, the multilingual tasks addressed, the languages investigated and available resources.
- Identified key challenges, distilled core findings and outlined promising avenues for future research.

Improving NLP model explanations using human annotations

Dec 2021 - Mar 2024

- Developed a novel contrastive-inspired loss to incorporate human annotations into NLP classification in a modeland explainer-agnostic way (NAACL Findings 2024, LatinX in NLP, MSc thesis).
- Employed a multi-objective optimizer to explore the trade-off between the contrastive and the original losses.
- Significantly improved the plausibility of post-hoc explanations (relative increase of 3.49% for a language model) without substantially degrading model performance.

Design of a novel explainer for GNN node classification

July 2022 - Jan 2023

- Distill n' Explain (AISTATS 2023) first distills the original GNN into an interpretable one and then explains the latter.
- Designed and proved lemmas and theorems that guarantee the method's explanation faithfulness.
- The proposed explainer outperformed previous methods in explanation accuracy while being orders of magnitude faster.

Development of a visual analytics system to apply legal understandings

Feb 2022 - May 2025

- LegalAnalytics (AI & Law 2025) employs ML, NLP, XAI and visualization methods to assist judicial experts in the application of understandings from the Brazilian Supreme Court.
- Conducted a literature review on XAI in the legal domain (ASAIL 2025).

Application of machine learning to binding precedents

June 2021 - Apr 2025

- Explored ML, NLP and topological data analysis in legal documents that cite Brazilian binding precedents (AI & Law 2025).
- Managed the annotation of legal documents by experts (contribution to other papers).

Development of a visual analytics system to explore citations in legal documents

Aug 2020 - Feb 2022

- LegalVis (TVCG 2023, VIS 2022, BSc thesis) employs ML, NLP, XAI and data visualization to infer non-explicit citations in Brazilian legal documents.
- Tested a diverse set of NLP classifiers (Transformers, word embeddings and bag-of-words) and achieved high accuracy (96%) in identifying citations.
- Employed a model-agnostic explainer (LIME) to explain the inferred citations.

Study of legal language models with topological data analysis

Apr 2023 - Sept 2024

- Exploration of the intersection between NLP and topological data analysis in legal documents.
- Publications expected in 2025.

Study of training data attribution

Oct 2022 - Sept 2024

- Explored methods to attribute model predictions to training data.
- Investigated the intersection between attribution, datamodeling and machine unlearning.
